EXPERIMENT 5

ROLL NO:240701470 **NAME:Sankara Gomathi R**

To do task analysis and user analysis for the garbage management system.

TASK ANALYSIS:

Task Analysis is the process of breaking down a user's interaction with a system into smaller steps to understand how the user completes a goal. It helps in improving usability and identifying possible issues in the application.

USER FLOW:

Start → Welcome screen

Check if user registered

If No → Sign up → Home screen

If Yes → Login → Home screen

Select option:

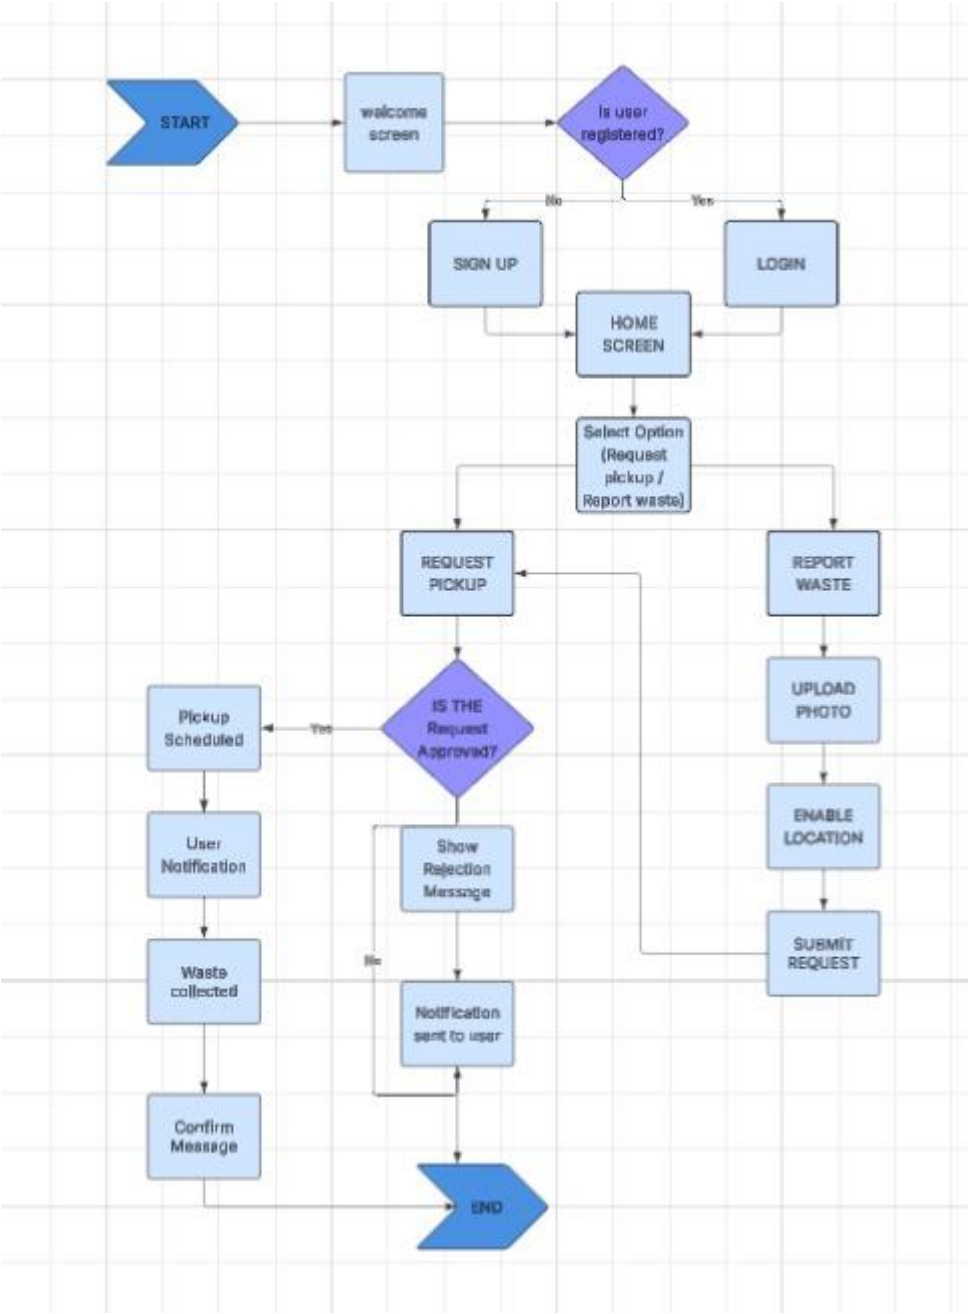
Request Pickup

If approved → Pickup scheduled → Notification → Waste collected → Confirmation → End

If not approved → Rejection message → Notification → End

Report Waste

Upload photo → Enable location → Submit request → End



🔄 User Flow (Step-wise with Explanation)

- **Step 1:**
  User starts the application → system launches and initializes.
- **Step 2:**
  Welcome screen is displayed → user sees the entry page.
- **Step 3:**
  System checks if the user is already registered → decision point.
- **Step 4:**
  If not registered → user enters details and completes **Sign Up**.

- **Step 5:**
  If registered → user enters credentials and completes **Login**.
- **Step 6:**
  User is redirected to the **Home Screen** after successful login/signup.
- **Step 7:**
  User selects an option → either **Request Pickup** or **Report Waste**.

- 🎁 If Request Pickup:
- **Step 8:**
  User sends a pickup request → system receives the request.
- **Step 9:**
  System checks whether the request is approved → decision point.
- **Step 10:**
  If approved → pickup is scheduled.
- **Step 11:**
  User receives notification about pickup.
- **Step 12:**
  Waste is collected by service.
- **Step 13:**
  System shows confirmation message.
- **Step 14:**
  Process ends.
- **Step 15:**
  If not approved → system shows rejection message.
- **Step 16:**
  Notification is sent to user.
- **Step 17:**
  Process ends.

- 🗑 If Report Waste:
- **Step 18:**
  User uploads a photo of the waste.
- **Step 19:**
  User enables location for tracking.
- **Step 20:**
  User submits the report request.
- **Step 21:**
  System processes the request and ends flow.

Result:

The user flow and task flow has been analysed successfully.
